

**FREE  
Cryptocurrency  
Report**

Congratulations on downloading this free report. This may be the most important report that you read this year that could not just set you up for residual income but actually create true generational wealth and provide real financial security during volatile times.

Make sure you read every single word before you proceed. It is important you do not confuse or misinterpret the contents and in any way or think this is a get-rich-quick or make money overnight program. If that is what you are looking for then exit out of this and go back to what you are doing. And most importantly, this is certainly not an investment and we are not providing any financial advice.

What you are going to learn about is disruptive technologies and disintermediation where companies that your parents and grandparents have known all their lives are now facing and competing with the technology advancements of the 21st century like innovative mobile apps and websites that are disrupting and overtaking billion-dollar industries and provided a more efficient and less expensive way to conduct business.

Listed below are a couple of industries overtaken by technology you are probably

familiar with.

Let's start with media in general. Ever since the fifties when television became popular there was only a few broadcasting Networks that controlled the television waves. Today there are hundreds and it has expanded beyond the TV set and on to our laptops and mobile devices. Not only can we access this content from our devices but we can create it and distribute it without the overhead that a major Broadcasting Company will most surely have. This is one example where the average person can now create content and compete with the major TV networks and do it with practically zero cost.

**MEDIA CONSUMERS**

*Companies used their broadcasting networks to give consumers content.*

NEWS  
RADIO  
TV

**MEDIA CREATORS**

Facebook YouTube Twitter

**GANGNAM STYLE**  
YouTube Videos  
Over 1B Views

**KONY 2012**  
YouTube Videos  
90M Views  
\$600M earned media

*Thanks to Technology and Social Media, consumers create their own content through platforms like Facebook, YouTube & Twitter, enabling you to reach the masses.*

If you remember the Gangnam Style video in 2010 that got over a billion views or the kony video released in 2012 that received the equivalent exposure of 600 million dollars of paid advertising and this was all done by individuals like you and me.

Another example, probably the most popular is Uber. Uber is now the fastest growing company in the history of the world with a value of over fifty billion dollars. They overtook the transportation and taxi industry in less than a decade with nothing more than a mobile app.

# TRANSPORTATION

U.S. TAXI INDUSTRY  
Existence since the 17th Century  
Industry Size: \$11 Billion annually

Uber decentralized the Transportation industry by creating the Uber mobile app, which allows consumers with smartphones to submit a trip request which is then routed to Uber drivers who use their own cars.

UBER  
Founded in 2009  
Valuation: \$50 Billion

Think about it, when you need a ride, you no longer say you need a taxi. You say you need an Uber. This company is so influential and essential it is already changing our speaking habits. They own no vehicles or taxis and the drivers have their own cars and are not directly employed. Talk about efficiency!

Ready to couch surf? One of my favorite examples is two brothers who could not afford a place to vacation so they rented out their couch and was able to turn that idea into a \$20 billion dollar + business. Meet AirBnB.

Going up against the hospitality giants like Hilton, Marriott and many others, these brothers have been able to penetrate and compete with the hotel leaders of the world with nothing more than a website that connects people who need a place to sleep with others who can accommodate.

There are plenty of other examples where technological disruption is transforming the way we do business and one of them is within our very own financial system. Though as evolved as we are technologically, our monetary and financial system is in a primitive state. There have been no revolutionary advances for quite a long time in this area.

And this is where we see a major opportunity to capitalize.

So how big is this opportunity and what is the potential?

Imagine if you could have invested in Uber before anybody knew about it. The early-stage investors had 6,000%+ returns.

Everyone who got in early was very happy. And even though Uber is the fastest growing company in the history of the world, the banking system is 10,000 times larger.

And even further, the circulation of money annually is \$80 trillion dollars. That is 100,000 times larger than the Uber business.

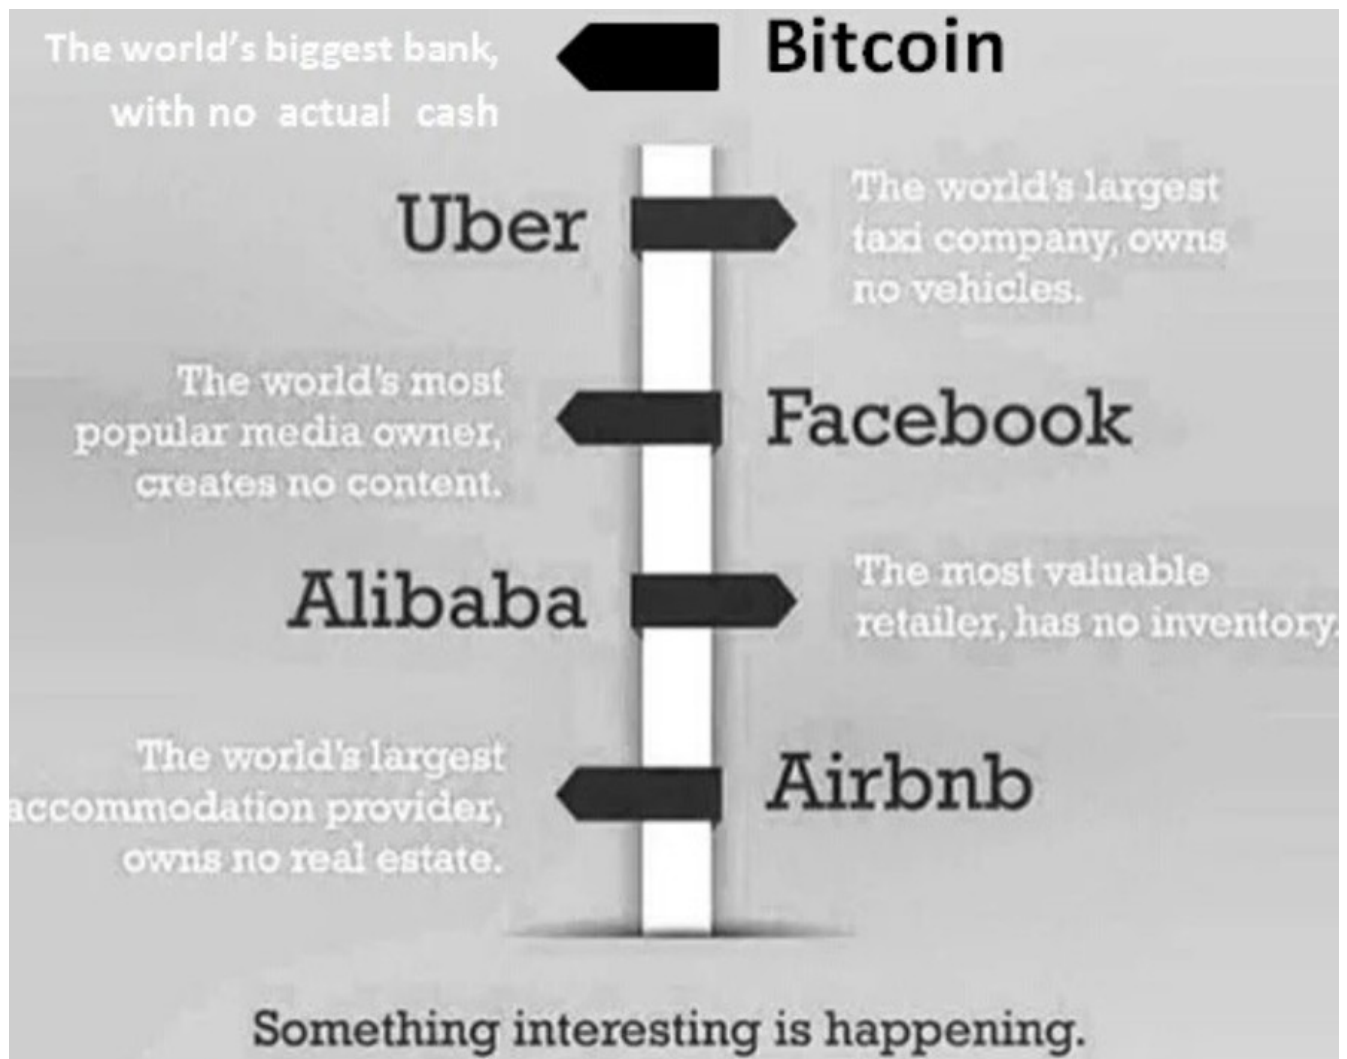

If you have heard of Bitcoin then you know what I'm talking about. The coin started at a fraction of a penny and went to \$1,200+ at one point. There are numerous stories of people who spent \$20 on bitcoin and walked away with close to 1 million dollars.

If you pay attention, you will see the wealthy and the knowledgeable entrepreneurs are shifting their attention and putting their money into crypto currencies like Bitcoin and others.

If you look at these three examples I just gave you, you will see a common theme. Not only are these companies and industries operated on computers and cell phones but these companies are not responsible for real estate, employees, or other overhead expenses that companies traditionally face.

You could say that YouTube is the largest media provider that owns no content. Airbnb is the largest Hospitality provider that owns no real estate, Uber is the largest transportation company with no vehicles and Bitcoin is the largest bank with no actual cash.

Now unfortunately you missed your chance with Bitcoin and so did I. But we did not miss our chance to capitalize on the booming cryptocurrency industry.

Thousands have tried to mimic the success of Bitcoin but very few are succeeding. Capricoin is the next generation cryptocurrency designed for the masses, using mobile devices to move money around faster and easier with zero fees.

We love what Bitcoin has done for the industry and it is the reason we are here today but we do believe that there are many opportunities for us to innovate and allow us to bring cryptocurrency mainstream through our integrated mobile application available for Android and iPhones.

*No other cryptocurrency has this technology!*

Fast, Secure and Easy

CapriPay is a Free Payment Solution Provider supported by an integrated cashback solution and merchant marketing system through FREE mobile applications.
